Chairman Norman Bay

Secretary Kimberly Bose

Federal Energy Regulatory Commission

Washington, DC 20426

Re: Docket CP15-558 PennEast Pipeline Project - Comments in response to the DEIS addressing geology and blasting.

Dear Chairman Bay, Secretary Bose and Members of FERC:

Holland Township Citizens Against the Pipeline (HCCAP) is a non-profit organization headquartered in Holland Township, New Jersey, representing thousands of individual concerned residents of Holland Township and our region who have a direct interest in protecting and preserving an irreplaceable community rich in farming and historic culture; preventing the destruction of endangered species' habitats and fragile watershed ecosystems; defending the Township's thriving agricultural and recreational economies; safeguarding the Township's citizens' proactive investment in conserved and preserved farms and woodlands; and opposing the PennEast Pipeline due to its irrevocable impact on the safety and integrity of the human environment. HCCAP is an Intervenor in this matter.

In our meetings and conversations with citizens in our region, we have heard many complaints about the flawed FERC public process including:

- frustrations about the functionality of the FERC website to obtain information or file comments on this docket;

- the frequent" outages" of the FERC website which result in a de facto shortening of the public's opportunity for public comment;
- the lack of FERC responses to, or DEIS acknowledgement of, significant environmental issues that have been frequently raised by citizens, municipalities and organizations either in filed comments, letters or voiced at public hearings;
- the lack of a realistic time period for citizens to analyze and respond to the complex and lengthy (1,174 pages) Draft Environmental Impact Statement (DEIS) – a mere 24 days from filing to the first public hearing;
- in contrast, the great latitude and deference that FERC provides to PennEast, allowing long extensions of time for the submittal and publication of required environmental impacts information on this complex project to FERC and to the public-significant information is still unavailable to the public with only days remaining in the public comment period;
- the failure of FERC through its actions and DEIS to call PennEast to task for its frequent mistakes of fact on significant environmental information that is readily obtainable through even minimal effort such as the location of public water supplies, blasting quarries, mines, historic districts, structures and the hundreds of private wells along the pipeline route – even after these mistakes have been repeatedly corrected by public comments; and
- the intimidating, demoralizing, arms- length, NONPUBLIC hearing process that FERC chose to impose on the hundreds of concerned citizens, legislators, municipalities, and organizations who took the time and effort to develop comments on the DEIS, despite the short window provided to analyze this complex document.

HCCAP shares the strong concerns of our citizenry about the incompetence and bad faith exhibited by PennEast throughout this process and the indifference of FERC to the injustice being done here. Our homes, our historic and cultural treasures, our livelihoods and local economy, our farms, our widely utilized recreational areas, and our life-sustaining drinking water are at stake here. We are not just lot and block numbers on a desktop survey program. Our lands have been preserved and cherished by our citizens and taxpayers in the most densely populated state in the nation.

In order to ensure that you hear the voices of our citizenry, particularly those individuals without computer access, HCCAP has collected more than 1,000 letters from our community members at a recent public event held on September 4, 2016. The letters were signed by the individual signatories in the presence of HCCAP officers and collected for this submission with the signatories' permission. The signatories consist of concerned citizens, interveners, and impacted landowners. HCCAP will be submitting these letters to you and to our state and federal legislators in groups that have been topically organized for your consideration and for ease of filing for this docket.

In closing, HCCAP urges FERC to wake up to the sea change that is occurring across our nation. Communities and citizens demand that our government and its agencies protect our environment, our homes and our cultural resources, even as we seek to meet the energy needs of our country. The PennEast pipeline project is an unnecessary, duplicative project that serves no one but the shareholders of this company. We urge you to withdraw the DEIS and reconsider the "No Build" option – it is the only option that makes sense for our future.

Sincerely,

Holland Township Citizens Against the Pipeline (HCCAP)

Cc:

President Barack Obama

U.S. Senator Robert Menendez

U.S. Senator Cory Booker

U.S. Congressman Leonard Lance

U.S. Congresswoman Bonnie Watson-Coleman

N.J. Senator Kip Batemen

N.J. Senator Shirley Turner

N.J. Assemblyman Jack Ciattarelli

N.J. Assemblyman Andrew Zwicker

N.J. Assemblyman Reed Gusciora

N.J. Assemblywoman Elizabeth Muoio

RE: PennEast Pipeline (CP15-558-000)

Dear Secretary Bose and Members of FERC:

My name is JAMES BENVENUTO in this proceeding

who lives in HAMILTON, NJ 08620.

I am commenting on the PennEast Draft Environmental Impact Statement (DEIS). The PennEast Draft Environmental Impact Statement (DEIS) is deficient and should be withdrawn.

I am concerned about the following geologic issues:

The Draft Environmental Impact Study ("DEIS") for the proposed PennEast ("PE") pipeline project states, on page ES-4 of the Executive Summary under the heading GEOLOGY: "WE CONCLUDE THAT THE PROJECT WOULD NOT HAVE SIGNIFICANT IMPACTS ON GEOLOGIC RESOURCES." [emphasis added].

Then it says "In addition, with the implementation of PennEast's proposed mitigation measures as well as its Blasting Plan, Karst Mitigation Plan, and E&SCP, and our recommendations, the geologic risk to Project facilities would be minimized."

But in another place in the Executive Summary FERC recommends PE file its Karst Mitigation Plan. FERC is not even requiring it to be done, but is just recommending PE file it, without giving a time for that Karst Mitigation Plan to be provided.

Finally, in their conclusion, FERC appears to rely on the Plans they haven't even seen yet to suggest the project would not have a significant impact on geologic resources.

How can FERC make that determination without having seen what PE is going to file? How can the public comment on something it hasn't seen yet?

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely,

James Benvenuto

RE: PennEast Pipeline (CP15-558-000)

Dear Secretary Bose and Members of FERC:

My name is Suzanne Macaoay, Concerned Citizen in this proceeding who lives in 25 [illegible] Phillips Road, Milford NJ.

I am commenting on the PennEast Draft Environmental Impact Statement (DEIS). The PennEast Draft Environmental Impact Statement (DEIS) is deficient and should be withdrawn.

I am concerned about the following geologic issues:

The Draft Environmental Impact Study ("DEIS") for the proposed PennEast ("PE") pipeline project states, on page ES-4 of the Executive Summary under the heading GEOLOGY: "WE CONCLUDE THAT THE PROJECT WOULD NOT HAVE SIGNIFICANT IMPACTS ON GEOLOGIC RESOURCES." [emphasis added].

Then it says "In addition, with the implementation of PennEast's proposed mitigation measures as well as its Blasting Plan, Karst Mitigation Plan, and E&SCP, and our recommendations, the geologic risk to Project facilities would be minimized."

But in another place in the Executive Summary FERC recommends PE file its Karst Mitigation Plan. FERC is not even requiring it to be done, but is just recommending PE file it, without giving a time for that Karst Mitigation Plan to be provided.

Finally, in their conclusion, FERC appears to rely on the Plans they haven't even seen yet to suggest the project would not have a significant impact on geologic resources.

How can FERC make that determination without having seen what PE is going to file? How can the public comment on something it hasn't seen yet?

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely, Suzanne Macaoay

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely,

Date: 9/24/16

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission

RE: PennEast Pipeline (CP15-558-000)

Dear Secretary Bose and Members of FERC:

My name is Heather Corsin, concerned resident in this proceeding who lives in 31 Green St, Milford NJ.

I am commenting on the PennEast Draft Environmental Impact Statement (DEIS). The PennEast Draft Environmental Impact Statement (DEIS) is deficient and should be withdrawn.

I am concerned about the following geologic issues:

The Draft Environmental Impact Study ("DEIS") for the proposed PennEast ("PE") pipeline project states, on page ES-4 of the Executive Summary under the heading GEOLOGY: "WE CONCLUDE THAT THE PROJECT WOULD NOT HAVE SIGNIFICANT IMPACTS ON GEOLOGIC RESOURCES." [emphasis added].

Then it says "In addition, with the implementation of PennEast's proposed mitigation measures as well as its Blasting Plan, Karst Mitigation Plan, and E&SCP, and our recommendations, the geologic risk to Project facilities would be minimized."

But in another place in the Executive Summary FERC recommends PE file its Karst Mitigation Plan. FERC is not even requiring it to be done, but is just recommending PE file it, without giving a time for that Karst Mitigation Plan to be provided.

Finally, in their conclusion, FERC appears to rely on the Plans they haven't even seen yet to suggest the project would not have a significant impact on geologic resources.

How can FERC make that determination without having seen what PE is going to file? How can the public comment on something it hasn't seen yet?

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely, Heather Corsin

Finally, in their conclusion, FERC appears to rely on the Plans they haven't even seen yet to suggest the project would not have a significant impact on geologic resources.

How can FERC make that determination without having seen what PE is going to file? How can the public comment on something it hasn't seen yet?

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely,

Laura Mirsky

RE: PennEast Pipeline (CP15-558-000)

Dear Secretary Bose and Members of FERC:

My name is Lois Wismer in this proceeding

who lives in Milford, NJ.

I am commenting on the PennEast Draft Environmental Impact Statement (DEIS). The PennEast Draft Environmental Impact Statement (DEIS) is deficient and should be withdrawn.

I am concerned about the following geologic issues:

The Draft Environmental Impact Study ("DEIS") for the proposed PennEast ("PE") pipeline project states, on page ES-4 of the Executive Summary under the heading GEOLOGY: "WE CONCLUDE THAT THE PROJECT WOULD NOT HAVE SIGNIFICANT IMPACTS ON GEOLOGIC RESOURCES." [emphasis added].

Then it says "In addition, with the implementation of PennEast's proposed mitigation measures as well as its Blasting Plan, Karst Mitigation Plan, and E&SCP, and our recommendations, the geologic risk to Project facilities would be minimized."

But in another place in the Executive Summary FERC recommends PE file its Karst Mitigation Plan. FERC is not even requiring it to be done, but is just recommending PE file it, without giving a time for that Karst Mitigation Plan to be provided.

Finally, in their conclusion, FERC appears to rely on the Plans they haven't even seen yet to suggest the project would not have a significant impact on geologic resources.

How can FERC make that determination without having seen what PE is going to file? How can the public comment on something it hasn't seen yet?

These kinds of omissions from the docket, together with FERC's pre-determination and the suggestion that whatever PE files wouldn't change how FERC has already decided are a breach of the NEPA standards and FERC's own regulations.

I call on the FERC to withdraw this DEIS until PennEast files all the missing information referenced therein, especially information having to do with the areas that PennEast intends to blast. Without this information, FERC cannot adequately address the possible implications and cannot make a determination risk to their project or, more importantly, to the public. Given that people's safety and constitutional rights to their property are at stake, we must be presented with a complete Draft Environmental Impact Study.

Sincerely,

Lois Wismer
