Docket: PF15-1-000

FEDERAL ENERGY
REGULATORY COMMISSION

 ORIGINAL

Dear Commissioners:

I support the PennEast Pipeline Project (Project) and I urge you to join me. The Project is an approximately 114-mile, 36-inch pipeline that will bring affordable natural gas to customers in New Jersey and Pennsylvania. With an investment of nearly \$1 billion, this new pipeline is designed to deliver approximately one billion cubic feet of natural gas per day — enough to serve more than 4.7 million homes.

New pipeline infrastructure is being driven by an increased demand for gas-fired electric generation, as well as from the residential, commercial and industrial sectors. This new infrastructure will aid consumers in seeing lower gas and electric rates, lesser price volatility during times of high demand — such as frigid temperatures — and better reliability as it pertains to gas and electric power generation.

The PennEast Pipeline will not only benefit energy consumers, but will also have a positive effect on local communities. The Project will create local jobs — specifically during its seven months of construction, contribute to state and local tax revenues and increase business for local stores and other retailers.

Lastly, the Project supports America's push toward energy independence and a cleaner energy future by maximizing locally produced, clean-burning natural gas. The PennEast Pipeline will help decrease our energy reliance on other countries while also reducing carbon emissions.

A cleaner and more independent energy future will be possible because of new infrastructure like the PennEast Pipeline Project. I urge you to support the development of this pipeline.

Sincerely,

Patrick Migliaccio
